Relativity theory is axiomatic (in its spirit) since its birth.

Two informal postulates of Einstein (1905):

- Principle of relativity: "The laws of nature are the same for every inertial observer."
- Light postulate: "Any ray of light moves in the 'stationary' system of co-ordinates with the determined velocity *c*, whether the ray be emitted by a stationary or by a moving body,"

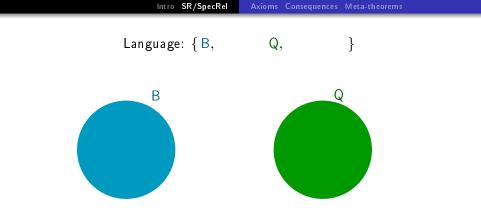

Relativity theory is axiomatic (in its spirit) since its birth.

Two informal postulates of Einstein (1905):

- Principle of relativity: "The laws of nature are the same for every inertial observer."
- Light postulate: "Any ray of light moves in the 'stationary' system of co-ordinates with the determined velocity *c*, whether the ray be emitted by a stationary or by a moving body,"

To axiomatize relativity theory within logic, we need a language (set of basic concepts).

・ 同 ト ・ ヨ ト ・ ヨ ト

B \local Bodies (things that move)

$\mathsf{Q} \longleftrightarrow \mathsf{Quantities}$

イロト イヨト イヨト イヨト

æ

Language: $\{B, IOb, Ph, Q, \}$

B ↔ → Bodies (things that move) IOb ↔ → Inertial Observers Ph ↔ Photons (light signals) Q ↔ → Quantities

▲御 ▶ ▲ ● ▶

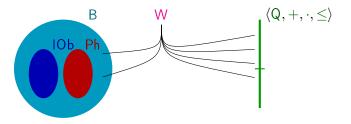

∃ ⊳

Language: { B, IOb, Ph, Q, $+, \cdot, \leq$, }

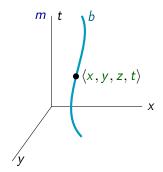

(日本) くほん くほん

Language: $\{B, IOb, Ph, Q, +, \cdot, \leq, W\}$

A (1) > (1) > (1)

 $W(m, b, x, y, z, t) \iff$ "observer *m* coordinatizes body *b* at spacetime location $\langle x, y, z, t \rangle$."

(日本)(日本)

< 注 → 注

 $W(m, b, x, y, z, t) \iff$ "observer *m* coordinatizes body *b* at spacetime location $\langle x, y, z, t \rangle$."

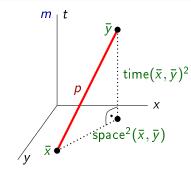

Worldline of body b according to observer m

$$wline_m(b) := \{ \langle x, y, z, t \rangle \in \mathbb{Q}^4 : W(m, b, x, y, z, t) \}$$

▲御 ▶ ▲ ● ▶

AxLight :

There is an inertial observer, according to whom, any light signal moves with the same velocity c in every direction.

$$\exists mc \Big[\mathsf{IOb}(m) \land c > 0 \land \forall \bar{x} \bar{y} \left(\exists p \Big[\mathsf{Ph}(p) \land \mathsf{W}(m, p, \bar{x}) \\ \land \mathsf{W}(m, p, \bar{y}) \Big] \leftrightarrow \mathsf{space}^2(\bar{x}, \bar{y}) = c^2 \cdot \mathsf{time}(\bar{x}, \bar{y})^2 \Big) \Big]$$

Let \mathcal{F} be the set of **potential laws of physics**.

 $SPR_{\mathcal{F}}$:

Every $\varphi \in \mathcal{F}$ potential law of physics either holds for every inertial observer or none of them.

 $\big\{ \mathsf{IOb}(m) \land \mathsf{IOb}(k) \to \big[\varphi(m, \bar{x}) \leftrightarrow \varphi(k, \bar{x}) \big] \, : \, \varphi \in \mathcal{F} \big\}.$

 $\mathsf{SPR}_{\mathcal{F}}: \{\mathsf{IOb}(m) \land \mathsf{IOb}(k) \to [\varphi(m,\bar{x}) \leftrightarrow \varphi(k,\bar{x})] : \varphi \in \mathcal{F}\}.$

(日) (四) (三) (三) (三)

 $\mathsf{SPR}_{\mathcal{F}}: \{\mathsf{IOb}(m) \land \mathsf{IOb}(k) \to [\varphi(m,\bar{x}) \leftrightarrow \varphi(k,\bar{x})] : \varphi \in \mathcal{F}\}.$

• $\mathcal{F} \subseteq$ "Formulas expressible in the language of the theory."

(ロ) (部) (E) (E) (E)

 $\mathsf{SPR}_{\mathcal{F}}: \{\mathsf{IOb}(m) \land \mathsf{IOb}(k) \to [\varphi(m,\bar{x}) \leftrightarrow \varphi(k,\bar{x})] : \varphi \in \mathcal{F}\}.$

- ullet $\mathcal{F}\subseteq$ "Formulas expressible in the language of the theory."
- We need a free variable for the observer on which we will evaluate the formula.

 $\mathsf{SPR}_{\mathcal{F}}: \{\mathsf{IOb}(m) \land \mathsf{IOb}(k) \to [\varphi(m,\bar{x}) \leftrightarrow \varphi(k,\bar{x})] : \varphi \in \mathcal{F}\}.$

- $\mathcal{F} \subseteq$ "Formulas expressible in the language of the theory."
- We need a free variable for the observer on which we will evaluate the formula.
- We do not want more free variables of type bodies.

 $\mathsf{SPR}_{\mathcal{F}}: \{\mathsf{IOb}(m) \land \mathsf{IOb}(k) \to [\varphi(m,\bar{x}) \leftrightarrow \varphi(k,\bar{x})] : \varphi \in \mathcal{F}\}.$

- $\mathcal{F} \subseteq$ "Formulas expressible in the language of the theory."
- We need a free variable for the observer on which we will evaluate the formula.
- We do not want more free variables of type bodies.
- We would like to use numbers as parameters.

(日本) (日本) (日本)

 $\mathsf{SPR}_{\mathcal{F}}: \{\mathsf{IOb}(m) \land \mathsf{IOb}(k) \to [\varphi(m,\bar{x}) \leftrightarrow \varphi(k,\bar{x})] : \varphi \in \mathcal{F}\}.$

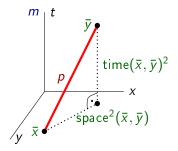

- $\mathcal{F} \subseteq$ "Formulas expressible in the language of the theory."
- We need a free variable for the observer on which we will evaluate the formula.
- We do not want more free variables of type bodies.
- We would like to use numbers as parameters.

 ${\sf SPR}^+$: when ${\cal F}$ contains all the formulas having only 1 free variable of type bodies.

AxPh :

For any inertial observer, the speed of light is the same in every direction everywhere, and it is finite. Furthermore, it is possible to send out a light signal in any direction.

$$\begin{aligned} \mathsf{IOb}(m) \to \exists c \left[c > 0 \land \forall \bar{x} \bar{y} \left(\exists p \left[\mathsf{Ph}(p) \land \mathsf{W}(m, p, \bar{x}) \right. \\ & \land \mathsf{W}(m, p, \bar{y}) \right] \leftrightarrow \mathsf{space}^2(\bar{x}, \bar{y}) = c^2 \cdot \mathsf{time}(\bar{x}, \bar{y})^2 \right) \end{aligned} \end{aligned}$$

< 🗇 > < 🖃 >

AxPh :

For any inertial observer, the speed of light is the same in every direction everywhere, and it is finite. Furthermore, it is <u>possible</u> to send out a light signal in any direction.

$$\begin{aligned} \mathsf{IOb}(m) \to \exists c \Big[c > 0 \land \forall \bar{x} \bar{y} \left(\exists p \big[\mathsf{Ph}(p) \land \mathsf{W}(m, p, \bar{x}) \\ \land \mathsf{W}(m, p, \bar{y}) \big] \leftrightarrow \mathsf{space}^2(\bar{x}, \bar{y}) = c^2 \cdot \mathsf{time}(\bar{x}, \bar{y})^2 \Big) \Big] \end{aligned}$$

See Attila Molnár's talk for capturing the notions of possibility in relativity within a modal logic frame.

A (1) > (1) > (1)

AxPh :

For any inertial observer, the speed of light is the same in every direction everywhere, and it is finite. Furthermore, it is possible to send out a light signal in any direction.

Proposition .:

 $SPR^+ + AxLight \Rightarrow AxPh$

 $SPR_{\mathcal{F}} + AxLight \Rightarrow AxPh, if$ $\exists p [Ph(p) \land W(m, p, \bar{x}) \land W(m, p, \bar{y})] \in \mathcal{F}.$

A (1) > (1) > (1)

AxOField :

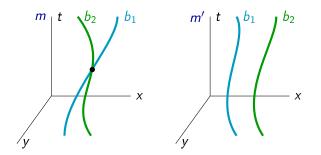

The structure of quantities $\langle Q, +, \cdot, \leq \rangle$ is an ordered field,

- Rational numbers: Q,
- $\mathbb{Q}(\sqrt{2}), \mathbb{Q}(\sqrt{3}), \mathbb{Q}(\pi), \ldots$
- Computable numbers,
- Constructable numbers,
- Real algebraic numbers: $\overline{\mathbb{Q}} \cap \mathbb{R}$,
- <u>Real numbers</u>: ℝ,
- Hyperrational numbers: Q*,
- Hyperreal numbers: \mathbb{R}^* ,
- Etc.

(日) (日)

AxEv :

Inertial observers coordinatize the same events (meetings of bodies).

 $\forall m \ m'\bar{x} \ \mathsf{IOb}(m) \land \mathsf{IOb}(m') \to \big[\exists \bar{x}' \ \forall b \ \mathsf{W}(m, b, \bar{x}) \leftrightarrow \mathsf{W}(m', b, \bar{x}') \big].$

▲ 同 ▶ → 注 ▶ → 注 ▶ →

AxEv :

Inertial observers coordinatize the same events (meetings of bodies).

 $\forall m \ m'\bar{x} \ \mathsf{IOb}(m) \land \mathsf{IOb}(m') \to \big[\exists \bar{x}' \ \forall b \ \mathsf{W}(m, b, \bar{x}) \leftrightarrow \mathsf{W}(m', b, \bar{x}') \big].$

▲□ ▶ ▲ □ ▶ ▲ □ ▶ ...

AxThExp :

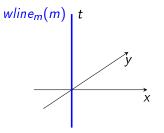

Inertial observers can move with any speed slower than that of light.

イロン イヨン イヨン イヨン

AxSelf :

Every Inertial observer is stationary according to himself.

 $\forall mxyzt \ (\mathsf{IOb}(m) \to [\mathsf{W}(m,m,x,y,z,t) \leftrightarrow x = y = z = 0]).$

▲圖 ▶ ▲ 国 ▶ → 国 ▶ →

AxSym :

Inertial observers agree as to the spatial distance between two events if these two events are simultaneous for both of them. Furthermore, the speed of light is 1.
