

Németi 70 conference diner, Budapest, 12 September 2012

Thank you all for coming to our conference! I hope you have enjoyed the conference at least as much as I did. You have probably noticed that this event is called “first.” This is so because we would like it to be the first of a whole series of conferences (hopefully an infinite series).

The great interest in the first event clearly shows that we should make this meeting regular. I would like to invite you to help and participate in the organization of the following conferences on Logic and Relativity Theory. As you know 3 years from now, 2015 will be the centenary of General Relativity which makes it a nice date for the 2nd of our meetings. Five years from now, Hajnal Andréka the founding mother of the Hungarian Research School of Logic and Relativity Theory will turn seventy which makes 2017 to an ideal date for the 3rd meeting. I have to admit that I don't know any event for the 4th meeting but we have 8 years to come up with one and we can of course come together without any anniversary. Don't be scared, I don't want to tell you a reason for the n -th conference for all the positive integers. I have mentioned the forth only to reach the 5th for which it is quite trivial to find a reason as 10 years from now István Németi will be 80.

Dear Hajnal and István I wish you that these wonderful research movements you have started/restarted in the borderline of Logic and Relativity Theory will flourish and grow at least in the rate it did in the past 15 years.

Dear István I wish you a very very happy Birth Day and many happy returns.

See you all in the 2nd International Conference on Logic and Relativity Theory.

Gergely Székely
