**Description:**
This discussion group aims to extend a discussion led by some senior and young researchers from four different countries since some years about variations and series of tasks. Katalin Gosztonyi wrote her PhD (2015) on the comparison of the Hungarian reform of mathematics education led by Varga (pointing out the importance of structuring problems in series and networks) and the French “mathématiques modernes” reform. Charlotte de Varent wrote her PhD (2018) on the use of history in mathematics education, pointing out the importance of small numerical variations in Mesopotamian scholarly context. Luxizi Zhang is working on her PhD (Zhang, 2019) towards an analytic model of “teaching mathematics through variation” from the analysis of teachers’ documentation work (Gueudet & Trouche, 2009) in China and France, making profit of the variation theory (Gu, Huang, & Marton, 2004) and the notion of didactic variable in the theory of didactical situations (Brousseau, 2002).

As the above mentioned examples illustrate, the ‘variation perspective’ (what will mean in the followings: variation as well as sequencing and networking of tasks and problems) appears as an important issue in various traditions of mathematics education, and at the core of teachers’ documentation work.

The aim of these discussions was to confront different implementations of this ‘variation perspective’, towards a common model, or a diversity of models, allowing on one hand to develop analytical tools for researchers, and on the other hand to support teachers design work. We consider that the ICME14, in the country of the Chinese “variations method” and thanks to the diversity of the conference’s public, would be a particularly well adapted context for the continuation of this collective work.

Planned Activities & Working Format & Responsible Person

21:30–21:40 Introduction
(The coordinators, plenary)

21:40–21:55 Presentation of the Chinese, Hungarian and French Handouts
(L. Zhang, K. Gosztonyi plenary)

Work in small groups.

22:15–22:35 Sharing the Results of the Four Groups
Collective discussion

Page 202 14th International Congress on Mathematical Education (ICME 14) July 11–18, 2021 · Shanghai

(A. Ramploud, plenary)

22:45–23:00 General Conclusions + Potential Plans for Further Research
(The coordinators, plenary)
